

CYGNET CREEP LOADING SYSTEMS

texkimp

Creel Loading Systems are most commonly used to lift and load large, heavy packages of fibre on and off a creel in a factory setting. They are an ideal option for loading and unloading multi-level creels.

These Creel Loading Systems use a machine interface controlled by an operator, and the effort required for each lift is lessened by pneumatics or mechanics.

The system is fitted to an overhead rail or floor-mounted stand, and optics, sensors and screen displays are used to assist the operator in picking and placing the load.
