

Cygnat Texkimp offers a range of Tow Preg processes designed to provide precise and cost-effective tapes at high volume and high speeds.

The methodology is similar to that used in our Prepreg processing technology, but incorporates a single tow – normally a 12k, 24k or 50k fibre-count tow – instead of a sheet of fibres.

Tow Pregs can be used as an alternative to Slit Tapes and wound or woven into parts with a reasonable wall thickness, such as pressure vessels for the automotive aerospace and marine markets.
